

Integrated metrology for advanced manufacturing	Andreas Archenti
Surface 3d macro and micro geometry measurements for ice friction research applications	Janis Lungevics, Ernests Jansons, Igor Velkavhr
Metrology challenges of the hyperscalers with novel solutions	Lukasz Redlarski
The work of ISO/TC 213 - a brief overview. Constraints between primary, secondary and tertiary datums in the datum system. Maximum material requirement	Zbigniew Humieny
Functional surfaces and intelligent manufacturing	Robert Tomkowski
A comparison of the commercial and non-commercial versions of the Feldkamp-Devis-Kress algorithm for computed tomography reconstruction	Paweł Wołkanowski, Ksenia Ostrowska
A procedure for handling severe signal drift: Mitigation and uncertainty budgeting	Kamil Kubiak
A vision-based method for roughness estimation	Andrzej Sioma
Analysis of domain shift in vision inspection systems using controlled synthetic data generation	Kacper Marciniak, Paweł Majewski, Jacek Reiner
Analysis of methods for assessing the internal surfaces of additively manufactured skeletal structures using computed tomography and optical	Piotr Niestony, Grzegorz Budzik, Mariusz Dębski, Jolanta Królczyk, Lidia Marciniak-Podsadna, Grzegorz Królczyk, Bartosz Gapiński, Michał Wieczorowski, Łukasz Przeszłowski, Katarzyna Nicińska, Łukasz Ślusarski, Natalia Wojciechowska
Analysis of selected metrological issues with 3D printed models	Dominik Malara, Tomasz Kozior, Jakub Łuszczek
Applicability of ISO 15530 uncertainty estimation methods beyond conventional CMMs	Konrad Kobiela
Application of micro-computed tomography in the measurement of re-entrant surfaces	Patryk Mietliński, Bartosz Gapiński, Tomasz Bartkowiak, Michał Wieczorowski
Assessing the accuracy of in situ focus position determination using plasma acoustic emissions	Maurycy Kempa, Jakub Mazur, Michał Ćwikła, Adrian Zakrzewsk and Jacek Reiner
Assessment of the influence of object color and geometry on the accuracy of optical coordinate measurements	Angelika Jarocha, Danuta Owczarek, Sylwia Pawlik
Banach-space analysis of interferometric surface repeatability for ceramic and steel reference artefacts	Dawid Kucharski
Determining the corner radius of a cutting insert using non-contact CMM measurements and point cloud analysis	Barbara Jamuła, Marek Magdziak

Development and validation of reference workpieces for determining the active volume of ionization chambers	Marta Rępańska, Tomasz Kowaluk, Piotr Tulik, Adam Wozniak
Ensuring the metrological quality of input measurement data in intelligent database systems supporting metrological processes	Danuta Owczarek
Evaluation of areal topographic parameters under variable thermal conditions using the focus variation technique	Karol Grochalski, Krzysztof Kupka, Julia Radziejewska
Evaluation of diameter and roundness deviation in incomplete round profile measurements	Lidia Smyczyńska, Bartosz Gapiński, Michał Jakubowicz
Evaluation of the influence of the exploitation process on the metrological properties of the touch-trigger probes for machine tools	Marta Rępańska, Adam Woźniak
Factors influencing LineScan probe measurement results	Marek Magdziak
Functional analysis of the surface geometric structure of NiTi alloy after different machining processes	Małgorzata Kowalczyk
Identification of rolling bearing vibration models based on selected geometric features of raceway surfaces using least-squares and minimax criteria	Anna Reboasz-Kurdek, Paweł Zmarzły
Impact of 3D printing conditions on the surface topography and hydrophilic properties of PET-G	Piotr Długosz, Aleksandra Mirowska and Michał Dobrzyński
Influence of build orientation on the dimensional accuracy of PLA-CU, TPU, and silicone-based specimens manufactured by additive technologies	Paweł Szczygieł
Interlab advanced measurement techniques laboratory - opportunities and prospects	Jacek Świdorski
Investigation of the influence of selected lighting-related aspects on the accuracy of measurements performed using a digital microscope	Piotr Gąska, Ryszard Machnik, Jakub Sycz, Szymon Stachurski, Wiktor Harmatys, Maciej Gruza, Adam Gąska
Measurement strategies for the characterization of corrosion-induced and porous surface topographies	Aleksandra Mirowska, Robert Tomkowski, Michał Dobrzyński, Amir Rashid, Sasan Dadbakhsh
Measurements and analysis of metallographic structure and hardness of ADI cast iron	Jarosław Jaroszek, Edward Miko
Measurements of the friction torque of rolling bearings containing contact seals	Mateusz Wrzochal
Method-independent reconstruction of optical polygon geometry from interferometric and autocollimator measurements using a traceable calibration framework	Ahmad F. K. Khamaysa
Metrological assessment of electrodynamic transducers for rolling bearing quality control	Paweł Bernaciak, Krzysztof Stępień

Metrological evaluation of the WEDM-machined surface of Inconel 617	Stefan Dzionk, Zoya Karatkevich
Microgeometric evaluation of injector nozzle orifices based on image analysis	Krzysztof Nozdrzykowski
Modelling of errors of chromatic white light sensors used on coordinate measuring machines	Adam Gąska, Wiktor Harmatys, Maciej Gruza, Piotr Gąska, Daniel Heißelmann, Lea-Jean Frömel, Katharina Janzen, Ulrich Neuschaefer-Rube
Multisensor system for roundness and diameter measurement	Michał Jakubowicz, Michał Wieczorowski
Optical 3D scanning system integrated with the workspace of a CNC machine tool	Łukasz Marchewka, Marek Grudziński
Optical measurements of the roundness profile of ball bearing seals	Paweł Zmarzły, Anna Rębosz-Kurdek
Problems with the dimensional inspection of thin-walled elements made using 3D printing technology	Jerzy Bochnia, Tomasz Kozior
Sources of measurement errors in surface texture evaluation in the aerospace industry: a case study	Michał Tagowski, Ireneusz Piotr Chmielik
Summary of the activities of the Polish Metrological Union	Jerzy Józwik
The effect of material type on the surface quality of gear wheel manufactured using the additive method	Jan Prus, Piotr Grzędziela, Dominika Konieczna, Krzysztof Stenka, Tomasz Wroński, Aleksandra Mirowska, Daniel Chuchała
The influence of carbon fiber reinforcement on the mechanical properties and surface geometric structure of PLA and PETG polyester materials in additive manufacturing processes	Urszula Kmiecik-Sołtysiak, Paweł Szczygieł
Thermal metrology-assisted calibration of a numerical model for MIG welding of aluminium specimens	Jakub Piwowar, Piotr Koruba, Piotr Lampa, Jacek Reiner
Wavelet-based analysis of repeatability in optical surface topography measurements	Damian Gogolewski
Wear evaluation of polyamide based additively manufactured tools using optical measurement methods	Dawid Zieliński, Sisay Workineh Agebo, Mariusz Deja
